

Project Overview

Creek Horizon Tower is a 58-storey residential tower planned for the Island District of Dubai Creek Harbour, developed by Vantage Point Developments. The tower will comprise 512 units across studio, 1BR, and 2BR configurations, with studios occupying floors 6 through 22 facing the Ras Al Khor Wildlife Sanctuary and the future Creek Tower site.

Vantage Point Developments describes Creek Horizon Tower as an entry-level investment product within Dubai Creek Harbour, targeting investors priced out of the district's larger flagship towers. Piling works began in Q3 2025, with the developer targeting a Q2 2029 handover.

The project sits within the wider Dubai Creek Harbour master plan being developed in phases, with Creek Horizon Tower forming part of the second release phase of the Island District.

Unit Specifications — Studio Collection

Studio units in Creek Horizon Tower range from 390 to 460 sqft. The standard unit, Type ST-06, measures 420 sqft including a 40 sqft balcony, and comprises a combined living/sleeping area, a kitchenette along one wall, and a single bathroom.

Units are delivered with a fitted kitchenette including a hob, extractor fan, and undercounter fridge, but full-size appliances such as a washing machine are listed as a purchaser-funded upgrade rather than a standard inclusion.

Each studio is allocated a single uncovered parking bay in the podium's upper levels; covered parking is available only as a paid upgrade of AED 25,000, payable separately from the Purchase Price.

Amenities & Lifestyle

The podium level includes a 35-metre lap pool, a gymnasium, and a shared co-working lounge. Unlike some larger towers in the district, Creek Horizon Tower does not include a dedicated cinema room or private dining facilities, positioning it as a value-oriented rather than ultra-amenitised product.

A retail podium fronting the planned Creek promenade will include a convenience store and a small selection of food and beverage outlets, though the brochure notes these are 'planned' rather than pre-leased at this stage.

Residents will have access to the wider Dubai Creek Harbour community amenities, including the Central Park and waterfront boardwalk, both currently under construction as part of the master developer's public realm programme.

Developer Track Record

Vantage Point Developments has delivered two residential projects in Dubai since 2018, both in Business Bay, totalling approximately 640 units. Its first project was delivered nine months behind its original schedule; its second was delivered approximately four months behind schedule.

This is Vantage Point Developments' first project in Dubai Creek Harbour and its largest to date by unit count. The developer states that it has engaged the same main contractor used on its second Business Bay project.

Vantage Point Developments maintains a RERA-registered escrow account for Creek Horizon Tower, and publishes quarterly construction updates on its investor portal.

Location & Connectivity

Creek Horizon Tower is located within the Island District of Dubai Creek Harbour, approximately 15 minutes by car from Downtown Dubai via Ras Al Khor Road, and roughly 20 minutes from Dubai International Airport.

The nearest planned metro connection is the Creek Harbour extension of the Dubai Metro, currently under construction, with the developer's marketing materials citing an expected opening in 2027, ahead of the tower's own anticipated handover.

Internal district transport, including a planned water taxi service connecting the Island District to Ras Al Khor and Downtown Dubai, remains at proposal stage according to the master developer's public disclosures.

Investment Highlights

Vantage Point Developments markets Creek Horizon Tower on its low entry price point relative to other Dubai Creek Harbour studios, citing the AED 2,000 per sqft launch price as roughly 10-15% below flagship towers in the district's first release phase.

The developer's payment plan is structured to minimise upfront cash requirements, with only 10% due before construction-linked instalments begin, and a significant post-handover component intended to let investors fund later payments partly from rental income once the unit is let.

The brochure notes that Dubai Creek Harbour has seen strong secondary-market price appreciation since its first towers were handed over, though it also notes this district remains earlier in its build-out cycle than Dubai Marina or Downtown Dubai, with several master-plan amenities still under construction.
